"...I am so happy with my new windows...I'd like to commend your work crew. Earbie and Larry were fantastic! I couldn't believe the clean-up EVERYDAY! The whole job took just a week even with all the rain delays. I would and WILL highly recommend your company to my friends and neighbors. Of course I won't need to say a word - the house is doing all the talking! Thank you so much for my beautiful new house."

Carol Zapiecki, Clearwater, FL

"Just a short note to express my appreciation for the work done on my mobile home. The crews that worked here...were gentlemen at all times, efficient, knowledgeable and prompt. You can be sure if I run into anybody who needs your type of work, I will surely recommend your company. It has been a very satisfying experience!"

Artificial intelligence is coming

Artificial intelligence sounds scary in science fiction stories and movies, but it's becoming a big factor in business success, according to a report from Tata Consultancy Services. Its survey of 834 executives across 13 global industry sectors found that 84 percent of organizations see AI as essential, and 50 percent believe it will transform their businesses.

AI doesn't appear to be cheap, though. Seven percent of business survey said they invested more than \$250 million on AI in 2016, and 2 percent expect to spend a billion dollars by the year 2020.

Energy drink and vodka? Think again

Energy drinks like Red Bull or Monster Energy are all the rage, and so is mixing them with alcohol for a more potent cocktail, especially among young people. But is it safe? In research reported on the WebMD website, the answer looks like "no."

Canadian researchers analyzed 13 studies involving alcohol mixed with highly caffeinated energy drinks. They found a higher rate of injury among people indulging in such cocktails compared with simply drinking alcohol by itself. Injuries included car accidents, falls, violence, and suicidal behavior.

The authors point out that the stimulant effects of energy-drink caffeine can mask the impact of alcohol, even though alcohol still has an impairing effect on the body and the brain.

Watch your waist in your 40s to avoid dementia later

Carrying belly weight during the 40s appears to increase the risk for dementia in the 70s, whereas carrying extra midsection weight later in life isn't as accurate an indicator. Researchers say these findings are disturbing because 50 percent of adults in the United States are considered abdominally obese.

Researchers at Kaiser Permanente studied 6,583 people who were between the ages of 40 and 45. An average of 36 years later, 16 percent of the participants—who had been measured for abdominal density—were diagnosed with dementia. Abdominal obesity increased the risk of dementia regardless of whether people had normal overall weight or were overweight or obese overall—and regardless of the health conditions including diabetes, cardiovascular disease, and stroke.
